The NHP Chamber Hosts Ribbon Cutting For The Beauty Cellar

On April 9, 2025 a crowd of community leaders, chamber directors, and elected officials gathered for a world-class red carpet ribbon cutting ceremony to celebrate the grand opening of The Beauty Cellar. This all new modern sanctuary for health, wellness, and rejuvenation is located at 700 Jericho Turnpike, New Hyde Park.

Led by Linda Mashabova, MSN-FNP (Master of Science in Nursing – Family Nurse Practitioner), offers a full suite of innovative services, including anti-aging treatments, wellness programs, beauty & sexual wellness solutions and more.

Linda was joined by her talented team: Tiffany Zambrano, Medical Assistant; Jacob Babadzhanov, Partner; Steve Shamayev, Patient Coordinator. Directors of the Greater New Hyde Park Chamber of Commerce, Elected officials from the Town of North Hempstead, Village of NHP and Nassau Country.

What's the connection between microplastics and increased antibiotic resistance?
- G.R. Brookville NY

Microplastics are tiny plastic fragments that pollute oceans, rivers and the air. They're now being linked to a serious public health threat known as antibiotic resistance. Scientists have started to uncover how these microscopic particles can be found everywhere from bottled water to human blood, which might be speeding up the spread of antibiotic-resistant bacteria. Given that antibiotic resistance is already a growing crisis with the potential to make common infections untreatable, the role of microplastics in this issue is raising serious concerns. But how exactly do these tiny particles contribute to such a big problem?

One way microplastics fuel antibiotic resistance is by acting as "hotspots" for bacteria to interact and exchange genes. "Microplastics provide a surface for bacteria to attach, form biofilms, and share genetic material, including antibiotic resistance genes," says Mengyan Li, an environmental microbiologist at the New Jersey Institute of Technology. As bacteria gather on microplastics in water systems or soil, they actively pass resistance traits to each other more easily. Over time, these interactions lead to more strains of bacteria that no longer respond to antibiotics, making infections way harder to treat.

Besides acting as bacteria breeding grounds, microplastics also carry chemicals that make

the problem even worse. Many plastics contain additives like bisphenols and phthalates that increase the chances that they develop resistance. Microplastics can also absorb antibiotics and other pollutants from the environment. This exposes bacteria to low doses of these drugs and encourages them to adapt. This combination of factors turns microplastics into tiny but dangerous incubators for antibiotic resistance.

That microplastics are everywhere makes tackling this issue really tough. These particles have been found in drinking water, seafood and even human organs, suggesting that we are constantly exposed to them. While the exact health impacts are still being studied, their ability to carry resistant bacteria into the human body is alarming to say the least.

If antibiotic-resistant microbes hitch a ride into the digestive system, they could potentially transfer resistance genes to the body's own bacteria. This makes the risk of hard-to-treat infections even worse.

Fixing this problem means reducing plastic pollution at its source. Experts suggest stricter regulations on plastic waste, better filtration in water treatment plants, and more research into biodegradable alternatives. Even though microplastics might seem small and insignificant, their role in the global antibiotic resistance crisis is definitely not. Other efforts should come from our doctors to only prescribe antibiotics when absolutely necessary. Efforts to combat antibiotic resistance are more important than ever.

GOT AN ENVIRONMENTAL QUESTION?

Send it to: EarthTalk, c/o E/The Environmental Magazine, P.O. Box 5098, Westport, CT 06881; submit it at: www.emagazine.com/earthtalk/thisweek/, or e-mail: earthtalk@emagazine.com.

RECIPE OF THE WEEK

Easy Enchilada Casserole

- 1 lb ground beef
- 1 tbsp minced onion
- 1 tbsp garlic powder
- 1 cup rice
- 1 can (14 1/2 oz) diced tomatoes
- 1 can (10.7 oz) enchilada sauce
- 1 can (15 oz) rinsed black beans
- 1 can (15 oz) whole corn
- 1 1/2 cups shredded cheddar cheese, divided
- 2 tbsp mesquite seasoning
- cilantro, for topping (optional)
- green onions, for topping (optional)

Heat oven to 350 F.

In skillet, brown ground beef with minced onion and garlic powder.

Drain and set aside.

Cook rice according to package instructions.

In casserole dish, mix meat, tomatoes, enchilada sauce, black beans, corn, rice, 1 cup cheddar cheese, and mesquite seasoning.

Bake, covered, 20 minutes.

Top with remaining cheese, cilantro and green onions.
